

Gavin Materials Handling Ltd manufactures and installs a comprehensive range of intelligent materials handling solutions from basic transportation conveyors to fully automated high speed sortation systems.

Due to an increasing demand for our services and expertise several vacancies have arisen within our company.

**Panel Wireman.**

We are currently seeking a skilled electrical engineer/technician with sound technical understanding to join our factory team assembling conveyor systems.

Previous experience as a panel wireman, service engineer or other electrical assembly experience is essential.

The key responsibilities of the role will be wiring and assembly of production machinery by working from electrical drawings, identification marking on cables, crimping cables and terminating into controllers, relays and terminals. The successful candidate will have experience.

Other duties may include a small amount of travel to oversee installation and commissioning works, assist in carrying out site service requirements, attending engineering meetings and working with design engineers to develop solutions that best match client specifications.

**Panel Wireman / Electrical Engineer Position Requirements;**

Previous experience within a panel wireman, service or other electrical engineering role is essential. A higher education qualification (such as NVQ / HND/C /Degree / Apprenticeship) in an electrical engineering field of study would be advantageous.

Strong verbal and written communication skills. Ability to work both as part of a team and individually. Willingness to travel if necessary (role will be predominantly factory based with occasional site visits to oversee installation and commissioning works and fulfil servicing and support requirements).
